1 Features

This single-display module is suitable for hand-held application. The LCD adopts one backlight with High brightness 6-lamps white LED and Touch panel

(1) LCD: 1.1 Amorphous-TFT 3.2 inch display, transmissive, Normally white type.

1.2 240(RGB)×320 dots Matrix

1.3 LCD Driver IC: ILI9320

1.4 Full 262,144 colors display.

Back ground: black (Back-Light, Red, Green, Blue dots are off state)

1.5 Viewing Direction 9 o'clock

(2) Low cross talk by frame rate modulation

(3) Direct data display with display RAM

(4) Partial display function: You can save power by limiting the display space.

(5) MPU 8,9,16, and18-bit interface selectable.

(6) ROHS compliant.

(7) Abundant command functions:

Area scroll function

Display direction switching function

Power saving function

(8) Mechanical specifications

Dimensions and weight

| Item | | Specifications | Unit |
|---------------------|-------------------|----------------------------|------|
| Active Display Size | | 3.2 inch diagonal(81.28mm) | mm |
| Main LCD | Outline Dimension | 55.64 (H) x 77.3(V) | mm |
| | Pixel pitch | 0.2025 (H) x 0.2025(V) | mm |
| | Active area | 48.6 (H) x 64.8 (V) | mm |
| | Number of Pixels | 240(H)x320(V) pixels | mm |

2 Absolute max. ratings and environment

2-1 Absolute max. ratings

Ta=25°C GND=0V

| Item | Symbol | Min. | Max. | Unit | Remarks |
|---------------|-----------|------|---------|------|---------|
| Power voltage | VDD – GND | -0.3 | +4.0 | V | |
| Power voltage | VBAT | -0.5 | +6 | V | |
| Input voltage | VIN | -0.5 | VDD+0.5 | V | |

2-2 Environment

| Item | Specifications | Remarks |
|-----------------------|----------------------------|---------------------------|
| Storage temperature | Max. +70 °C Min. -20 °C | Note 1: Non-condensing |
| Operating temperature | Max. +60 °C Min. -10 °C | Note 1: Non-condensing |

Note 1 : Ta ≤ +40 °C Max.85%RH

Ta > +40 °C The max. humidity should not exceed the humidity with 40°C 85%RH.

5 Block Diagram

Display format: A-Si TFT transmissive, Normally white type.

Display composition: 240(RGB) x 320 dots

LCD Driver: ILI9320

Back light: White LED x 6 ($I_{LED}=15mA$)

6 Interface specifications

| Pin No. | Terminal | Functions | | | | |
|---------|----------|--|-----|--------|-----------------------------|------------------------------------|
| 1 | VSS | Ground pins. | | | | |
| 2 | XL | Touch Panel Left Side. | | | | |
| 3 | XR | Touch Panel Right Side. | | | | |
| 4 | YD | Touch Panel Down Side. | | | | |
| 5 | YU | Touch Panel Up Side. | | | | |
| 6 | VSS | Ground pins. | | | | |
| 7 | IM0/ID | IM3 | IM1 | IM0/ID | MPU-Interface Mode | DB Pin in use |
| | | 0 | 1 | 0 | i80-system 16-bit interface | DB[17:10], DB[8:1]; (JP1 2-3short) |
| 8 | IM1 | 0 | 1 | 1 | i80-system 8-bit interface | DB[17:10]; (JP1 2-3short) |
| | | 1 | 1 | 0 | i80-system 18-bit interface | DB[17:0]; (JP1 2-3short) |
| 9 | IM3 | 1 | 1 | 1 | i80-system 9-bit interface | DB[17:9]; (JP1 2-3short) |
| | | 0 | 0 | ID | Serial Peripheral Interface | SDI, SDO; (JP1 1-2short) |
| 10 | SDO | Serial bus interface data output pin. | | | | |
| 11 | NC | No Connection. | | | | |
| 12 | SDI | Serial bus interface data input pin. | | | | |
| 13-30 | D17-D0 | 18-bit bidirectional bus Connect to VSS when the serial interface is selected. | | | | |
| 31 | /CS | Chip selection pin. The "L" level enables inputting commands and reading /writing data. | | | | |
| 32 | /RESET | Switching to "L" initializes internally. Must be reset after the power is supplied. | | | | |
| 33 | RS | Command/display Data Selection. | | | | |
| 34 | WR/SCL | Write enable signal/Serial bus interface clock input pin. | | | | |
| 35 | /RD | Read enable signal. | | | | |
| 36 | VSYNC | Frame synchronizing signal in RGB I/F mode. (JP1 1-2short) | | | | |
| 37 | HSYNC | Frame synchronizing signal in RGB I/F mode. (JP1 1-2short) | | | | |
| 38 | DOTCLK | Dot clock signal in RGB I/F mode. (JP1 1-2short) | | | | |
| 39 | ENABLE | A data ENABLE signal in RGB I/F mode. (JP1 1-2short) | | | | |
| 40 | VCC | Power supply for Step-up circuit. (VCI=2.5~3.3V). | | | | |
| 41 | VCC | | | | | |
| 42 | VSS | Ground pins. | | | | |
| 43 | LED_K | Power supply for LED (Cathode). | | | | |
| 44 | LED_A | Power supply for LED (Anode). | | | | |
| 45 | VSS | Ground pins. | | | | |

7 System Interface

7.1 80-system 18-bit interface

The i80/18-bit system interface is selected by setting the IM[3:0] as "1010" levels.

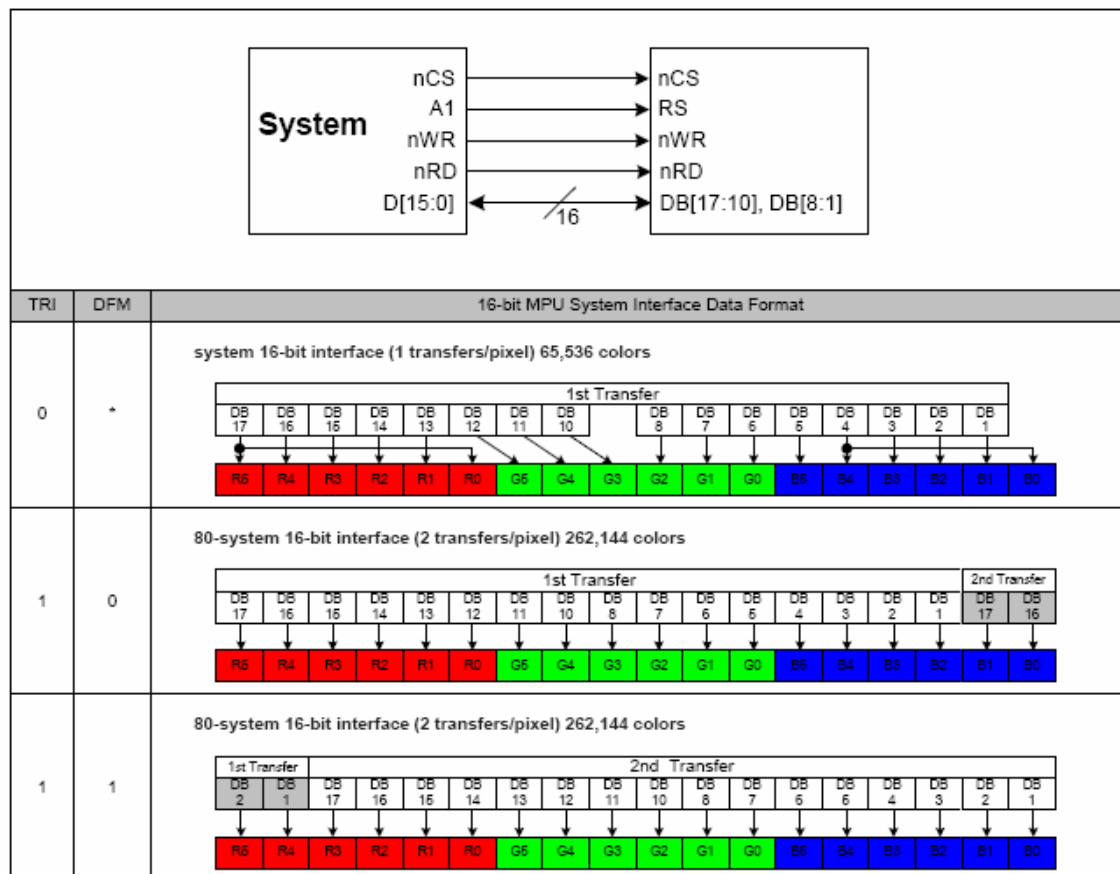

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

7.2 80-system 16-bit interface

The i80/16-bit system interface is selected by setting the IM[3:0] as "0010" levels. The 262K or 65K color can be display through the 16-bit MPU interface. When the 262K color is displayed, two transfers (1st transfer: 2 bits, 2nd transfer: 16 bits or 1st transfer: 16 bits, 2nd transfer: 2 bits) are necessary for the 16-bit CPU interface.

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

7.3 80-system 9-bit interface

The i80/9-bit system interface is selected by setting the IM[3:0] as "1011" and the DB17~DB9 pins are used to transfer the data. When writing the 16-bit register, the data is divided into upper byte (8 bits and LSB is not used) lower byte and the upper byte is transferred first. The display data is also divided in upper byte (9 bits) and lower byte, and the upper byte is transferred first. The unused DB[8:0] pins must be tied to either Vcc or AGND.

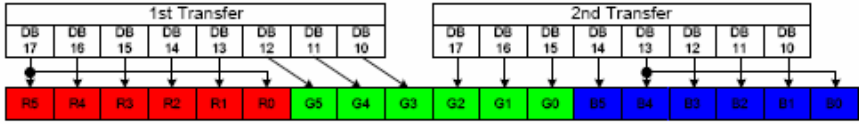

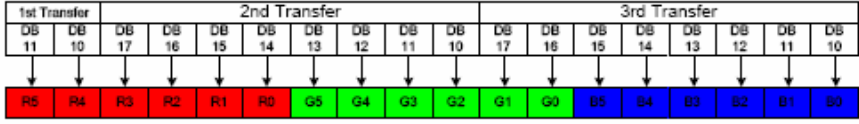

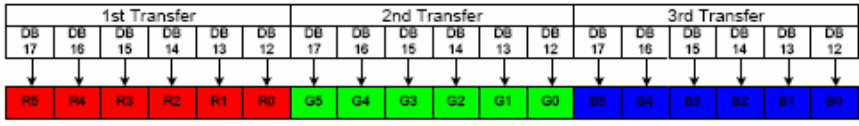

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

7.4 80-system 8-bit interface

The i80/8-bit system interface is selected by setting the IM[3:0] as "0011" and the DB17~DB10 pins are used to transfer the data. When writing the 16-bit register, the data is divided into upper byte (8 bits and LSB is not used) lower byte and the upper byte is transferred first. The display data is also divided in upper byte (8 bits) and lower byte, and the upper byte is transferred first. The written data is expanded into 18 bits internally (see the figure below) and then written into GRAM. The unused DB[9:0] pins must be tied to either Vcc or AGND.

| TRI | DFM | 8-bit MPU System Interface Data Format |
|-----|-----|--|
| 0 | * | <p>system 8-bit interface (2 transfers/pixel) 65,536 colors</p>  |
| 1 | 0 | <p>80-system 8-bit interface (3 transfers/pixel) 262,144 colors</p>  |
| 1 | 1 | <p>80-system 8-bit interface (3 transfers/pixel) 262,144 colors</p>  |

Data transfer synchronization in 8/9-bit bus interface mode

ILI9320 supports a data transfer synchronization function to reset upper and lower counters which count the transfers numbers of upper and lower byte in 8/9-bit interface mode. If a mismatch arises in the numbers of transfers between the upper and lower byte counters due to noise and so on, the "00" register is written 4 times consecutively to reset the upper and lower counters so that data transfer will restart with a transfer of upper byte. This synchronization function can effectively prevent display error if the upper/lower counters are periodically reset.

Figure6 Data Transfer Synchronization in 8/9-bit System Interface

Preliminary

7.5 RGB interface

The RGB Interface mode is available for ILI9320 and the interface is selected by setting the RIM[1:0] bits as following table.

| RIM1 | RIM0 | RGB Interface | DB pins |
|------|------|----------------------|---------------------|
| 0 | 0 | 18-bit RGB Interface | DB[17:0] |
| 0 | 1 | 16-bit RGB Interface | DB[17:13], DB[11:1] |
| 1 | 0 | 6-bit RGB Interface | DB[17:12] |
| 1 | 1 | Setting prohibited | |

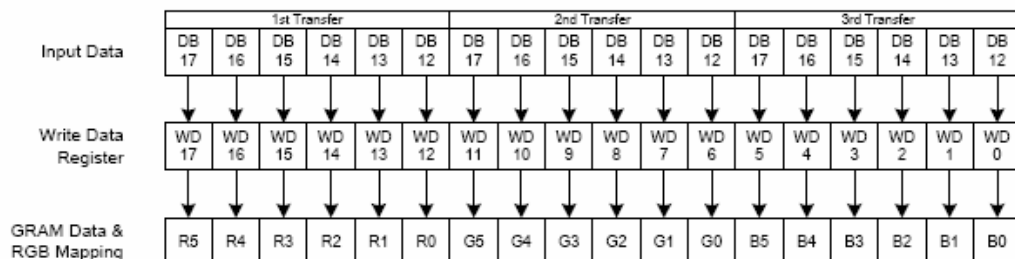

18-bit RGB Interface (262K colors)

16-bit RGB Interface (65K colors)

6-bit RGB Interface (262K colors)

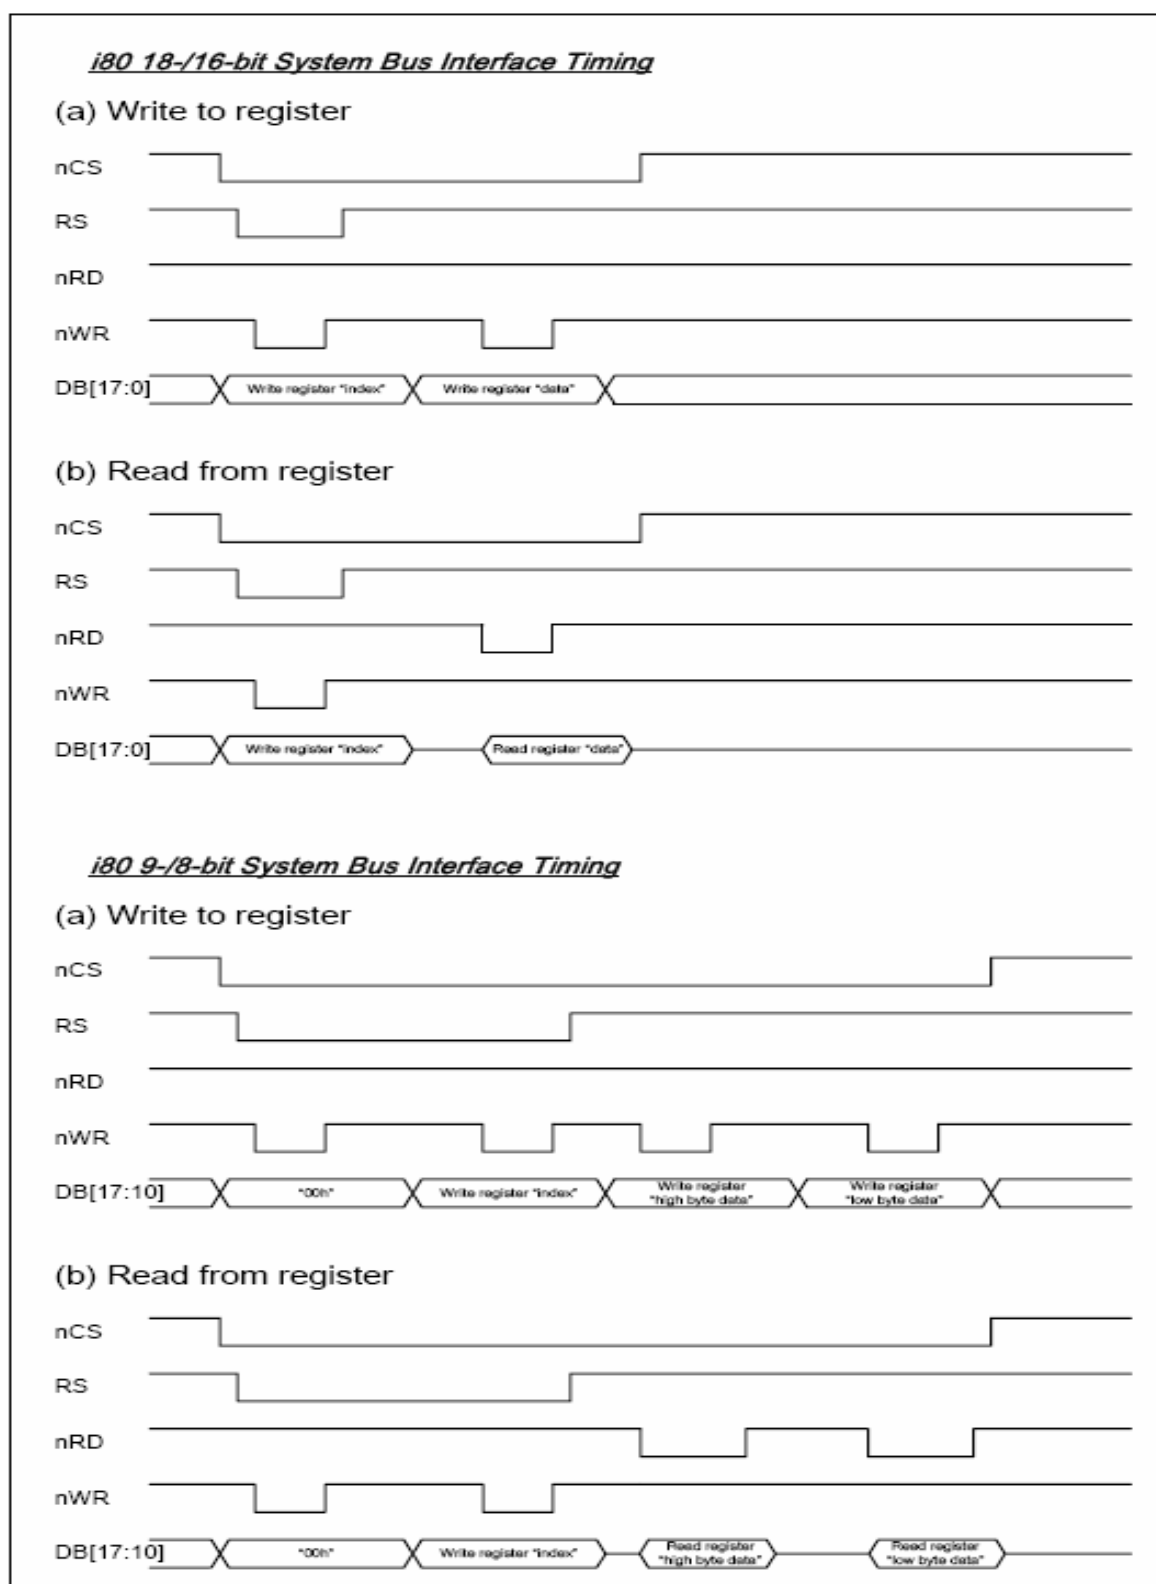

Preliminary

9 Application

9.1 Display ON / OFF

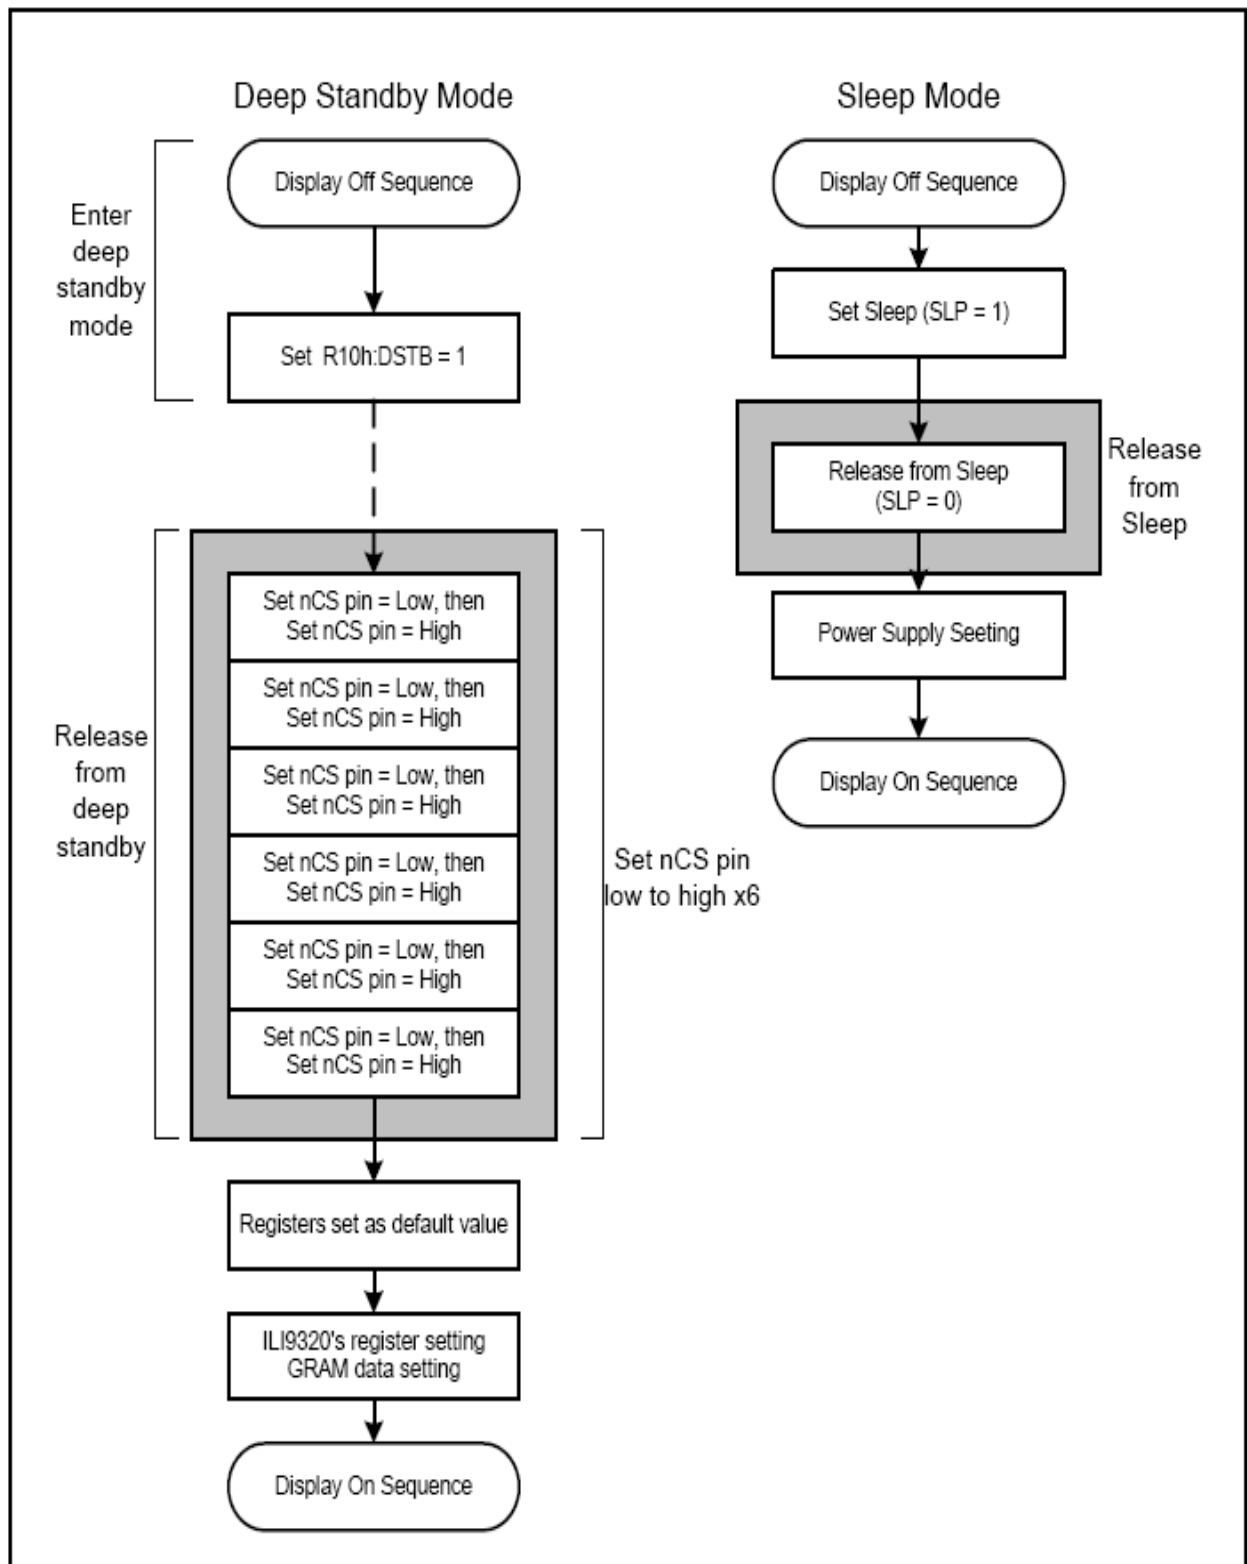

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

9.2 Deep Standby and Sleep Mode

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

9.3 Power Supply Configuration

When supplying and cutting off power, follow the sequence below. The setting time for oscillators, step-up circuits and operational amplifiers depends on external resistance and capacitance.

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

10 Timing Characteristics

10.1 Clock Characteristics

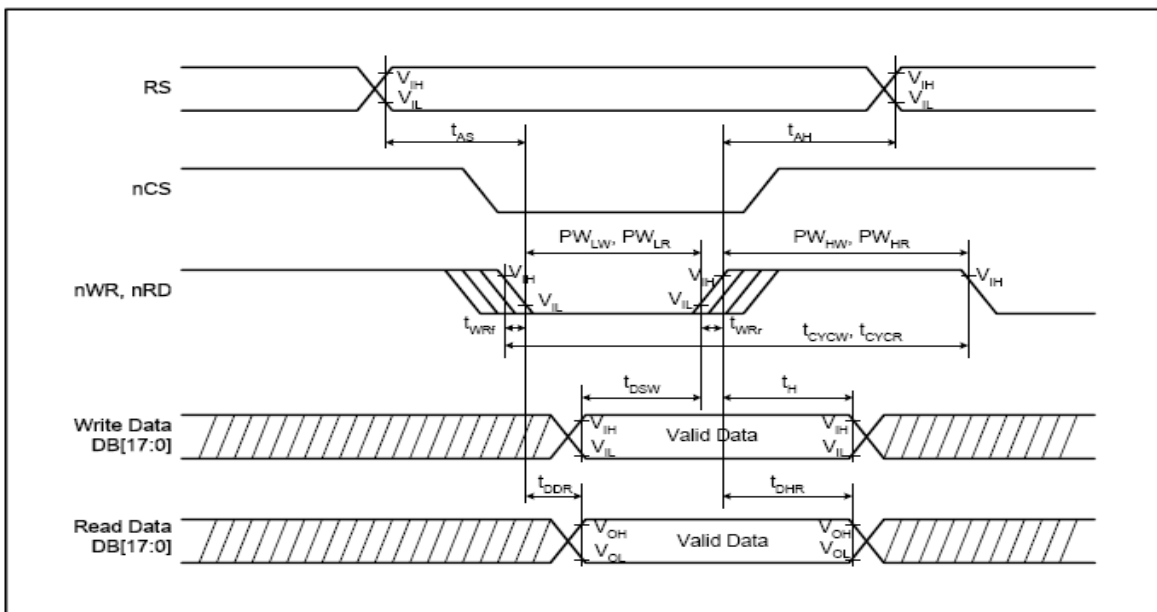

VCC = 2.40 ~ 3.30V, IOVCC = 1.65 ~ 3.30V

| Item | Symbol | Test Condition | Min. | Typ. | Max. | Unit |
|-----------------------------|-------------------|------------------------|------|------|------|------|
| External Clock Frequency | f _{cp} | VCC = 2.4 ~ 3.3V | 450 | 550 | 650 | KHz |
| External Clock Duty | f _{duty} | VCC = 2.4 ~ 3.3V | 45 | 50 | 55 | |
| External Clock Rising Time | Trcp | VCC = 2.4 ~ 3.3V | - | - | 0.2 | μs |
| External Clock Falling Time | Tfcp | VCC = 2.4 ~ 3.3V | - | - | 0.2 | μs |
| RC oscillation clock | f _{osc} | Rf = 100KΩ, VCC = 2.8V | 450 | 550 | 650 | KHz |

10.2 AC Characteristics (i80 – system Interface Timing Characteristics)

Normal Write Mode (IOVCC = 1.65~3.3V, VCC=2.4~3.3V)

| Item | Symbol | Unit | Min. | Typ. | Max. | Test Condition |
|-------------------------------|------------------------------------|-------------------|------|------|------|----------------|
| Bus cycle time | Write | t _{CYCW} | ns | 100 | - | - |
| | Read | t _{CYCR} | ns | 300 | - | - |
| Write low-level pulse width | PW _{LW} | ns | 50 | - | 500 | - |
| Write high-level pulse width | PW _{HW} | ns | 50 | - | - | - |
| Read low-level pulse width | PW _{LR} | ns | 150 | - | - | - |
| Read high-level pulse width | PW _{HR} | ns | 150 | - | - | - |
| Write / Read rise / fall time | t _{WRP} /t _{WRF} | ns | - | - | 25 | - |
| Setup time | Write (RS to nCS, E/nWR) | t _{AS} | ns | 10 | - | - |
| | Read (RS to nCS, RW/nRD) | | ns | 5 | - | - |
| Address hold time | t _{AH} | ns | 5 | - | - | - |
| Write data set up time | t _{DSW} | ns | 10 | - | - | - |
| Write data hold time | t _H | ns | 15 | - | - | - |
| Read data delay time | t _{DDR} | ns | - | - | 100 | - |
| Read data hold time | t _{DHR} | ns | 5 | - | - | - |

Preliminary

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

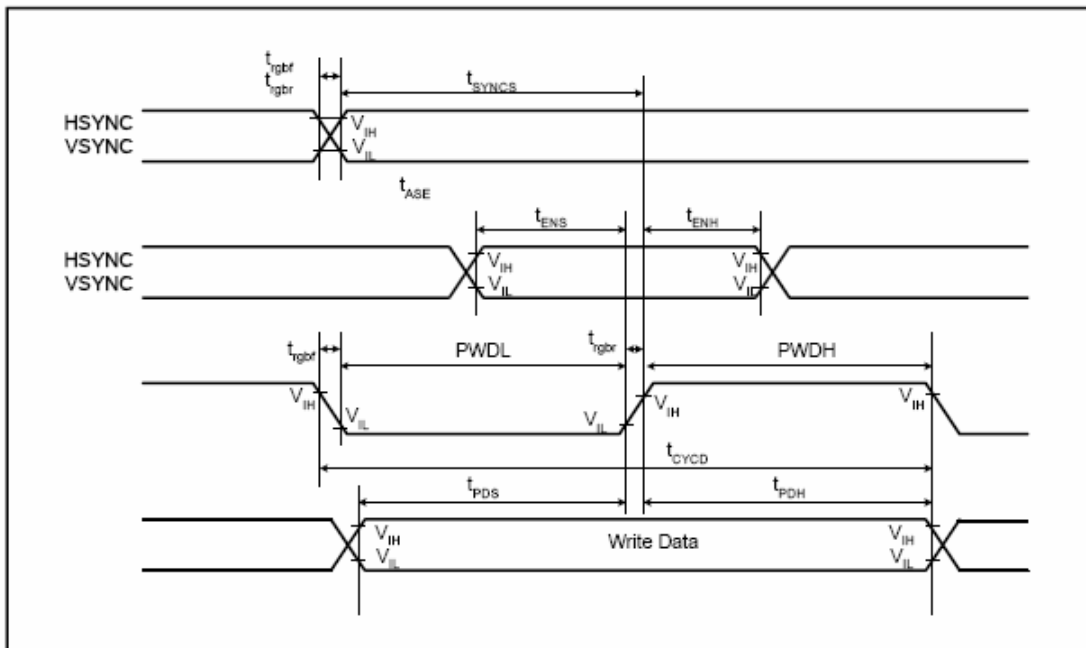

10.3 AC Characteristics (RGB Interface Timing Characteristics)

18/16-bit Bus RGB Interface Mode (IOVCC = 1.65 ~ 3.3V, VCC=2.4~3.3V)

| Item | Symbol | Unit | Min. | Typ. | Max. | Test Condition |
|--------------------------------------|----------------------|------|------|------|------|----------------|
| VSYNC/HSYNC setup time | t_{SYNCS} | ns | 0 | - | - | - |
| ENABLE setup time | t_{ENS} | ns | 10 | - | - | - |
| ENABLE hold time | t_{ENH} | ns | 10 | - | - | - |
| PD Data setup time | t_{PDS} | ns | 10 | - | - | - |
| PD Data hold time | t_{PDH} | ns | 40 | - | - | - |
| DOTCLK high-level pulse width | PWDH | ns | 40 | - | - | - |
| DOTCLK low-level pulse width | PWDL | ns | 40 | - | - | - |
| DOTCLK cycle time | t_{CYCD} | ns | 100 | - | - | - |
| DOTCLK, VSYNC, HSYNC, rise/fall time | t_{rghr}, t_{grhf} | ns | - | - | 25 | - |

6-bit Bus RGB Interface Mode (IOVCC = 1.65 ~ 3.3V, VCC=2.4~3.3V)

| Item | Symbol | Unit | Min. | Typ. | Max. | Test Condition |
|--------------------------------------|----------------------|------|------|------|------|----------------|
| VSYNC/HSYNC setup time | t_{SYNCS} | ns | 0 | - | - | - |
| ENABLE setup time | t_{ENS} | ns | 10 | - | - | - |
| ENABLE hold time | t_{ENH} | ns | 10 | - | - | - |
| PD Data setup time | t_{PDS} | ns | 10 | - | - | - |
| PD Data hold time | t_{PDH} | ns | 30 | - | - | - |
| DOTCLK high-level pulse width | PWDH | ns | 30 | - | - | - |
| DOTCLK low-level pulse width | PWDL | ns | 30 | - | - | - |
| DOTCLK cycle time | t_{CYCD} | ns | 80 | - | - | - |
| DOTCLK, VSYNC, HSYNC, rise/fall time | t_{rghr}, t_{grhf} | ns | - | - | 25 | - |

Preliminary

11 QUALITY AND RELIABILITY

11.1 TEST CONDITIONS

Tests should be conducted under the following conditions :

Ambient temperature : $25 \pm 5^{\circ}\text{C}$

Humidity : $60 \pm 25\% \text{ RH}$.

11.2 SAMPLING PLAN

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

11.3 ACCEPTABLE QUALITY LEVEL

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

11.4 APPEARANCE

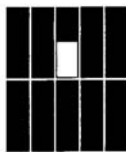

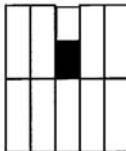

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under fluorescent light. The inspection area of LCD panel shall be within the range of following limits.

Preliminary

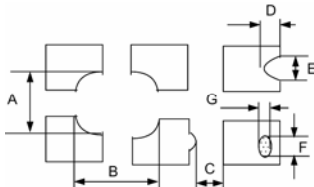

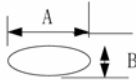

The contents of this document are confidential and must not be disclosed wholly or in part to any third part without the prior written consent of AMP DISPLAY

11.5.2 Touch Panel

Cosmetic Limit Standard (suitable in view area, except dot spacer)

Quality inspection standard :

Inspect sampling standard : according to AQL MIL-STD-105E Level II

Serious defect (serious crack : possible expanding) 0.01

Major defect 0.65

Minor defect 1.5

Scope

The standard shall be applied to view area only

For the area outside the view area, shall be acceptable unless any scratch or irregularity which affects electrical performance.

Criterion of visual inspection shall according to limit sample.

However, the chip and crack should be applied to the whole part of touch panel.

Inspection condition :

(A). The lightness of environment is 500 Lux

(B). The distance between product and eye is about 30cm

(C). The angle of 60° between eye

(D). Inspection method is under a ceiling fluorescent light (white color).

(E). Reference document of cosmetic inspection specification :

Item 8-3 ~ 8-9.

(F). W= width, L= length, D= diameter => (longest + shortest)/2

(G). Please find data below for your reference.

Newton Ring

Inspect criteria by limit sample.

(A). The lightness of environment is 500 Lux

(B). The distance between product and eye is about 30cm

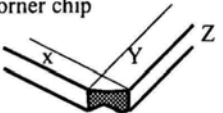

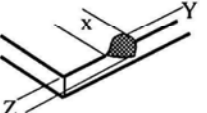

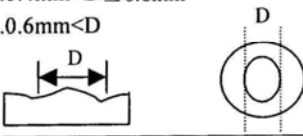

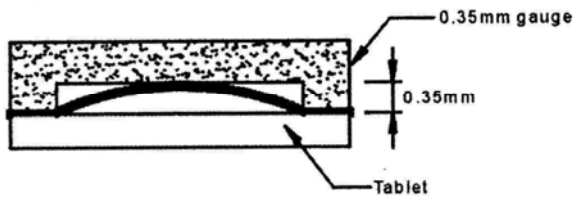

(C). The angle of 60° between eye

(D). Please find data below for your reference.

(E). Newton Ring area be under 10% of to total display area.

11.6 RELIABILITY

| Test Item | Test Conditions | Note |
|----------------------------|---|------|
| High Temperature Operation | 60±3°C , t=96 hrs | |
| Low Temperature Operation | -10±3°C , t=96 hrs | |
| High Temperature Storage | 70±3°C , t=96 hrs | 1,2 |
| Low Temperature Storage | -20±3°C , t=96 hrs | 1,2 |
| Humidity Test | 40°C , Humidity 90%, 96 hrs | 1,2 |
| Thermal Shock Test | -20°C ~ 25°C ~ 70°C 30 min. 5 min. 30 min. (1 cycle) Total 5 cycle | 1,2 |
| Vibration Test (Packing) | Sweep frequency : 10~55~10 Hz/1min Amplitude : 0.75mm Test direction : X.Y.Z/3 axis Duration : 30min/each axis | 2 |

Note 1 : Condensation of water is not permitted on the module.

Note 2 : The module should be inspected after 1 hour storage in normal conditions

(15-35°C , 45-65%RH).

Definitions of life end point :

- Current drain should be smaller than the specific value.
- Function of the module should be maintained.
- Appearance and display quality should not have degraded noticeably.
- Contrast ratio should be greater than 50% of the initial value.

12 Use precautions

12-1 Handling precautions

- 1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
- 2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzine and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
- 3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
- 4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

12-2 Installing precautions

- 1) The PCB has many ICs that may be damaged easily by static electricity. To prevent breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx. $1M\Omega$ and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.
- 2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
- 3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
- 4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause

the polarizing plate to peel off.

12-3 Storage precautions

- 1) Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
- 2) Choose the dark spaces where the product is not exposed to direct sunlight or fluorescent light.
- 3) Store the products as they are put in the boxes provided from us or in the same conditions as we recommend.

12-4 Operating precautions

- 1) Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
- 2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
- 3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC drive voltage.
- 4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
- 5) Make certain that each signal noise level is within the standard (L level: 0.2V_{dd} or less and H level: 0.8V_{dd} or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.
- 6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
- 7) The characteristic of the semiconductor element changes when it is exposed

to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that they are shielded from light emissions.

- 8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.

12-5 Other

- 1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
- 2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.
