Revision Date	Page	Contents	Editor
2009/4/17	--	New Release 80/8Bit MCU interface+Touch Panel+Touch Panel controller TSC2046	Kokai

1 Features

4.3 inch Amorphous-TFT-LCD (Thin Film Transistor Liquid Crystal Display) module. This module is composed of a 4.3" TFT-LCD panel, LCD controller, power driver circuit, touch panel and backlight unit.

1.1 TFT Panel Feature :

(1) Construction: 4.3" a-Si color TFT-LCD, White LED Backlight and PCB.
(2) Resolution (pixel): 480(R.G.B) X 272
(3) Number of the Colors : 262K colors (R , G , B 6 bit digital each)
(4) LCD type : Transmissive Color TFT LCD (normally White)
(5) Interface: 40 pin pitch 0.5
(6) Power Supply Voltage: 3.3V single power input. Built-in power supply circuit.
(7) Viewing Direction: 6 O'clock (The direction it's hard to be discolored):

1.2 LCD Controller Feature:

(1) MCU interface 8/9/16/18 bit 80&68 series MCU interface.
(2) Display RAM size : 640x320x3x6 bits. Ex : 320x240 two frame buffer with 262K colors.
(3) Arbitrary display memory start position selection.
(4) MCU interface : 8 bit / 9 bit / 16bit / 18 bits 80/68 MPU interface.
(5) 8 bit / 16 bit interface support 65K (R5G6B5) /262K(R6G6B6) colors data format.
(6) 9 bit / 18 bit interface support 262K(R6G6B6) colors data format only.

2 Physical specifications

Item	Specifications	Unit
Display resolution(dot)	480(R.G.B.) (W) x 272(H)	mm
Active area	95.04 (W) x 53.856 (H)	mm
Screen size	4.3 (Diagonal)	mm
Pixel size	0.198 (W) x 0.198 (H)	um
Color configuration	R.G.B stripe	
Overall dimension	105.5(W) x 67.2(H) x 7.61(D)	mm
Weight	T.B.D	mg
Backlight unit	LED	

3 Default Setting & Option

- Interface :

The user can select the MCU interface by change the Jumper & Resister Array.

Setting / Interface Type	JP1	RA1	RA2	RA3	RA4	Remark
80-18Bit interface	1,2 short 2,3 open	2K ohm	OPEN	OPEN	OPEN	
80-16Bit interface	1,2 short 2,3 open	OPEN	2K ohm	OPEN	OPEN

68-9Bit interface	1,2 open 2,3 short	OPEN	OPEN	2K ohm	OPEN	
68-8Bit interface	1,2 open 2,3 short	OPEN	OPEN	OPEN	2K ohm	

- LED Driver:

The user can select the LED driver built-in or not.

Pin Define / Interface Type	PIN3 LEDA/PWM	PIN4 LEDK	Remark
Without LED Driver	LED Anode	LED Cathode	
With LED Driver	**PWM** The PWM pin combined enable and brightness adjust function. When PWM=High constantly, the LED back-light is turn on. When PWM=GND constantly, the LED back-light is turn off. When PWM signal (100Hz to 1KHz) input, the LED Back-light brightness is relative to duty cycle of the PWM signal.	**NC** This pin must be open	**Default**

- Touch panel and Touch panel controller:

The user can select the with TP controller or without TP controller.

Pin Define / Option	SK/X1	DO/X2	DI/Y1	TPCS/Y2	IRQ	Remark
Without TP	NC	NC	NC	NC	NC	
With TP / Without TP controller	X1	X2	Y1	Y2	NC	
With TP / With TP controller	**SK**	**DO**	**DI**	**TPCS**	**IRQ**	**Default**

If user want to change the default setting for mass production, please contact with Ampire. We'll apply a new P/N for you.

4.1.2 Environmental Absolute max. ratings

Item	OPERATING		STORAGE		Remark
	MIN	MAX	MIN	MAX	
Temperature	-20	70	-30	80	Note2,3,4,5,6,7
Humidity	Note1		Note1		
Corrosive Gas	Not Acceptable		Not Acceptable		

Note1 : Ta <= 40℃ : 85% RH max

Ta > 40℃ : Absolute humidity must be lower than the humidity of 85%RH at 40℃

Note2 : For storage condition Ta at -30℃ < 48h , at 80℃ < 100h

For operating condition Ta at -20℃ < 100h

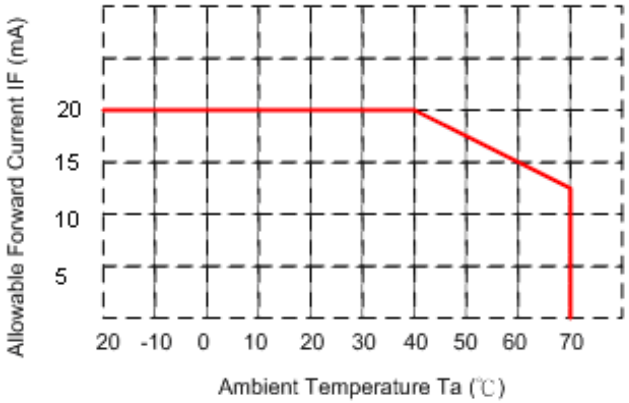
Note3 : Background color changes slightly depending on ambient temperature. This phenomenon is reversible.

Note4 : The response time will be slower at low temperature.

Note5 : Only operation is guarantied at operating temperature. Contrast , response time, another display quality are evaluated at +25℃

Note6 :

- LED BL : When LCM is operated over 40℃ ambient temperature, the I_{LED} of the LED back-light should be follow :



Note7 : This is panel surface temperature, not ambient temperature.
Note8 :

- LED BL:When LCM be operated over than 40℃ , the life time of the LED back-light will be reduced.

White chromaticity		X_W		(0.279)	(0.309)	(0.339)		
		Y_W		(0.320)	(0.350)	(0.380)		

( )For reference only. These data should be update according the prototype.

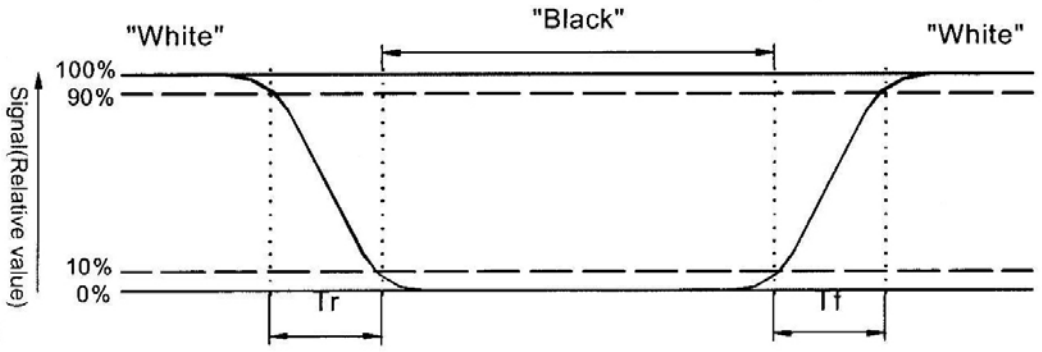
Note 1:

- LED BL : Ambient temperature=25□,and lamp current I_{LED}=20mA.To be measured in the dark room.

Note 2:To be measured on the center area of panel with a viewing cone of 1°by Topcon luminance meter BM-7,after 10 minutes operation.

Note 3.Definition of response time:

The output signals of photo detector are measured when the input signals are changed from “black“ to “white”(falling time) and from ”white” to “black” (rising time),respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.



Note 4.Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

$$\text{Contrast ratio(CR)} = \frac{\text{Photo detector output when LCD is at "White" state}}{\text{Photo detector Output when LCD is at "Black" state}}$$

Note 5:White $V_i = V_{i50} + 1.5V$

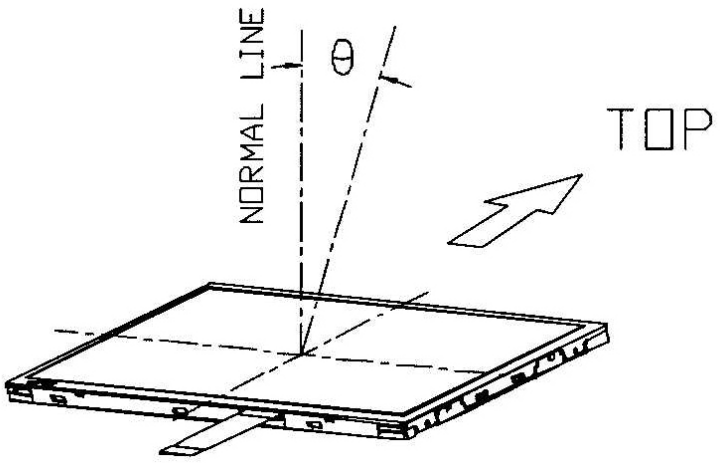
Black $V_i = V_{i50} + 2.0V$

"±"means that the analog input signal swings in phase with V_{COM} signal.

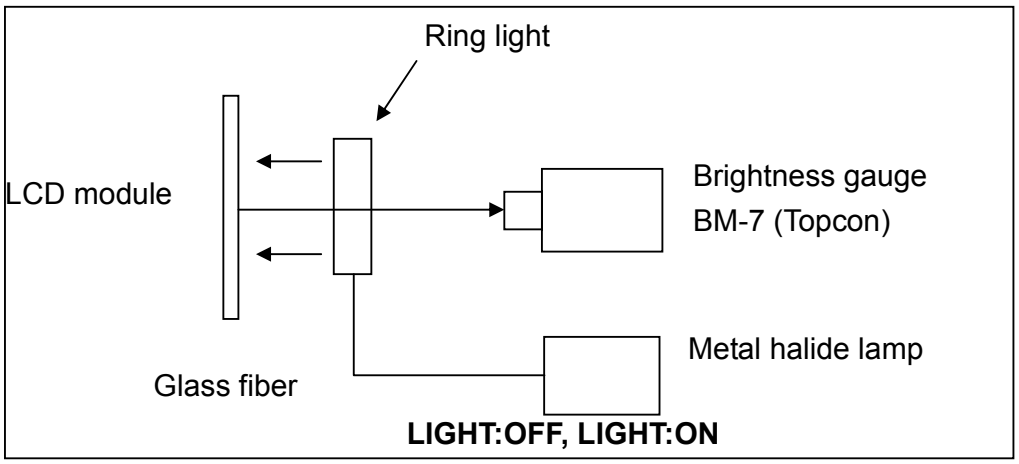
"$\frac{-}{+}$" means that the analog input signal swings out of phase with V_{COM} signal.

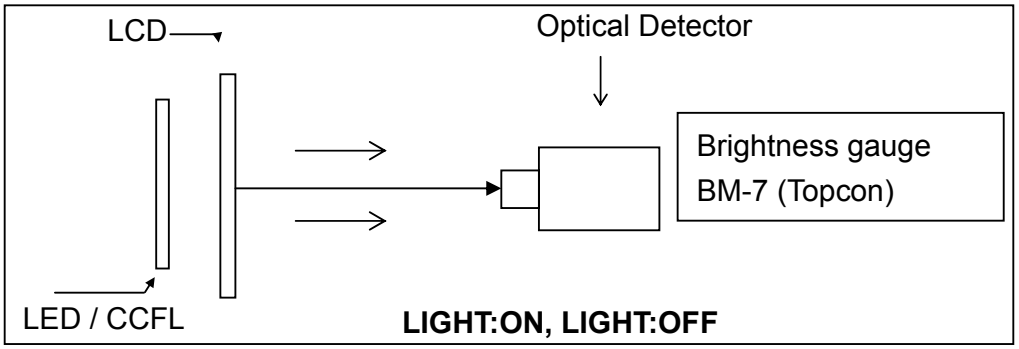
V_{i50} : The analog input voltage when transmission is 50%.The 100% Transmission is defined as the transmission of LCD panel when all the Input terminals of module are electrically opened.

Note 6.Definition of viewing angle, Refer to figure as below.



Note 7.Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.





5.2 Optical characteristic of the LED Back-light

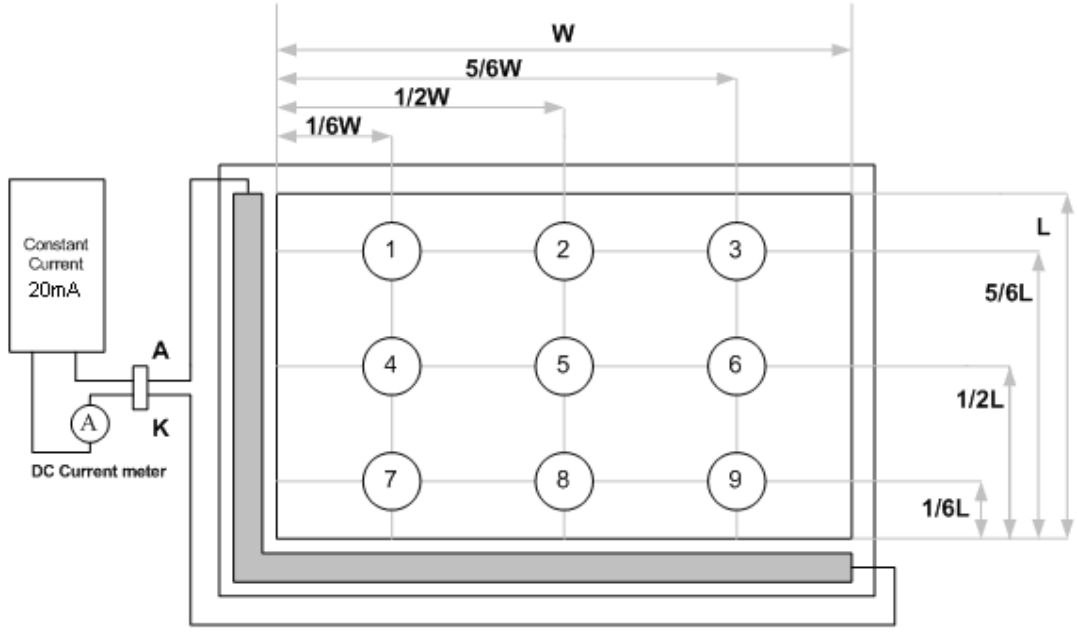
AVG. X of 1931 C.I.E.	(0.25)	(0.28)	(0.31)	--	I_{LED} = 20 mA,Ta=25□
Brightness Uniformity	80	--	--	%	I_{LED} = 20 mA,Ta=25□

( )For reference only. These data should be update according the prototype.

Note1 : Measurement after 10 minutes from LED BL operating.

Note2 : Measurement of the following 9 places on the display.



Note3: The Uniformity definition

(Min Brightness / Max Brightness) x 100%

5.3 Touch Panel Electrical Specification

To simplify the address control of display RAM access, the window area address function allows for writing data only within a window area of display RAM specified by registers REG[00]~REG[07] .

After writing data to the display RAM, the Address counter will be increased within setting window address-range which is specified by

MIN X address (REG[0] & REG[1])
MAX X address (REG[2] & REG[3])
MIN Y address (REG[4] & REG[5])
MAX Y address (REG[6] & REG[7])
Therefore, data can be written consecutively without thinking the data address.

10 QUALITY AND RELIABILITY

10.1 TEST CONDITIONS

Tests should be conducted under the following conditions :

Ambient temperature : 25 ± 5°C

Humidity : 60 ± 25% RH.

10.2 SAMPLING PLAN

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

10.3 ACCEPTABLE QUALITY LEVEL

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

10.4 APPEARANCE

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under flourescent light. The inspection area of LCD panel shall be within the range of following limits.

12 USE PRECAUTIONS

12.1 Handling precautions

1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzine and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

12.2 Installing precautions

1) The PCB has many ICs that may be damaged easily by static electricity. To prevent

breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx. 1MΩ and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.

2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause the polarizing plate to peel off.

12.3 Storage precautions

1) Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
2) Choose the dark spaces where the product is not exposed to direct sunlight or fluorescent light.
3) Store the products as they are put in the boxes provided from us or in the same conditions as we recommend.

12.4 Operating precautions

1) Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC dive voltage.
4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
5) Make certain that each signal noise level is within the standard (L level: 0.2Vdd or

less and H level: 0.8Vdd or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.

6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
7) The characteristic of the semiconductor element changes when it is exposed to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that they are shielded from light emissions.
8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.

12.5 Other

1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.
3) AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
